Serial Number 10/023,117 Art Unit 2183 Paper Number 20050524

- 1. Claims 1-6 remain for examination.
- 2. The text of those sections of Title 35, US Code not included in this action can be found in a prior Office Action.
- 3. The drawings are objected to as failing to comply with 37 CFR § 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 16, 164b, 164c, 164d. Correction is required.
- 4. The drawings are objected to as failing to comply with 37 CFR § 1.84(p(4) because reference characters "166" and "20" have both been used to designate the connection circuit. Correction is required.
- 5. Claims 1-6 are rejected under 35 USC § 103 as being unpatentable over Hauck et al., The Chimaera Reconfigurable Functional Unit, The 5th Annual IEEE Symposium on FPGAs for Custom Computing Machines, April 16-18, 1997, in view of DeHon, Transit Note # 118 Notes on Coupling Processors with Reconfigurable Logic.

<u>Hauck et al.</u> was cited as a prior art reference in paper number 8, mailed September 15, 2004.

6. The rejections are respectfully maintained and incorporated by reference as set forth in the last office action, paper number 20050524, mailed May, 27 2005.

Hauck et al. taught the claimed invention as detailed in the prior office action. Hauck et al. did not teach that for at least one configured function, the second programmable connection circuit reversed the relative order of outputs of different basic blocks, however, Hauck's circuitry provided the ability to perform such a reversal as all output blocks from all functional units are connected in common to all O1 ... O4 output multiplexers). DeHon taught utilizing reconfigurable logic for flexible input-output systems (pgs. 2-8) including using reconfigurable logic for reversal/rearrangement of data values (pg. 7, Byte swapping, Field extraction and insertion).

7. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have combined DeHon's system of reversal/rearrangement of data

values with Hauck's system <u>because</u> of DeHon's teaching that using reconfigurable logic for such functions provides performance, cost, and flexibility advantages (pg. 8, 'Advantage Summary" section).

- 8. Applicant's arguments with respect to claims 1-6 have been considered but are deemed to be most in view of the new grounds of rejection.
- 9. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Richard Ellis whose telephone number is (571) 272-4165. The Examiner can normally be reached on Monday through Thursday from 7am to 5pm.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Eddie Chan, can be reached on (571) 272-4162. The fax phone number for the USPTO is: (703)872-9306.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (571) 272-2100.

Richard Ellis December 6, 2005
